

# Challenges and opportunities in preventing first-pregnancies among adolescents: social determinants of contraceptive behavior.

*Session: The challenge of preventing unintended pregnancies: sharing best practices*

*Dr. Raffaella Schiavon E.  
Independent Consultant  
Mexico*

14-19 OCTUBRE 2018  
RIOCENTRO | RIO DE JANEIRO | BRASIL

## Declaration of Good Standing and Conflict of Interest Disclosure

My presentation complies with FIGO's policy for declaration of good standing and conflict of interest disclosure;  
I do not have a financial interest in any product for service related to my presentation;  
My participation at this Congress  
has been supported by: Merck Sharp & Dohme (MSD)

## Learning objectives

- 1) To review the situation of Early Unintended Pregnancy (EUnP) and its social determinants
- 2) To review best evidence-based practices to reduce EUnP
- 3) To analyze implementation strategies and public policies in sexual and reproductive health.

## Adolescent Fertility Rate, 2015

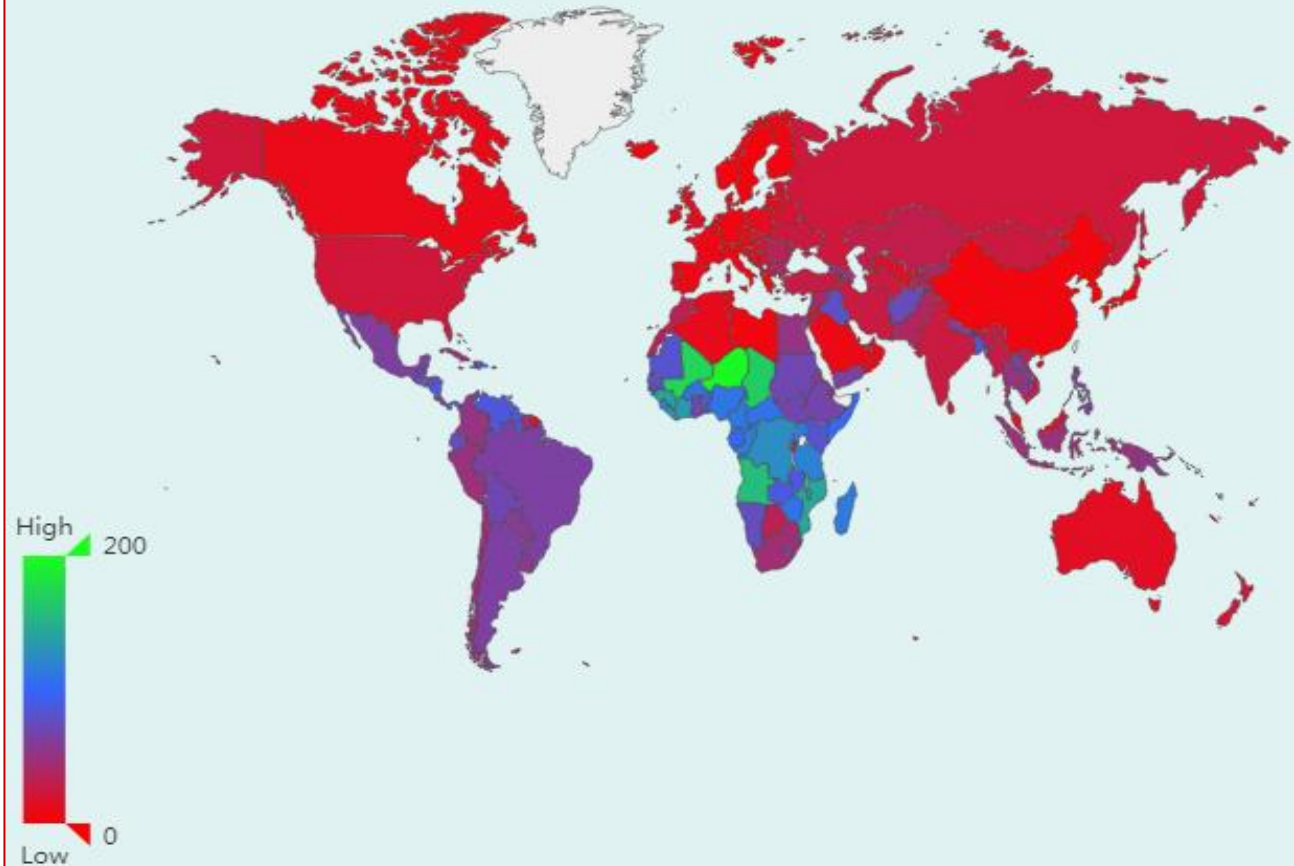

Annually, approximately **16 million** adolescent girls (15 to 19 years) and **2.5 million** girls under 15 years give birth in developing regions.

*Darroch J, et al. Adding it up: Costs and benefits of meeting the contraceptive needs of adolescents. New York: Guttmacher Institute; 2016.*

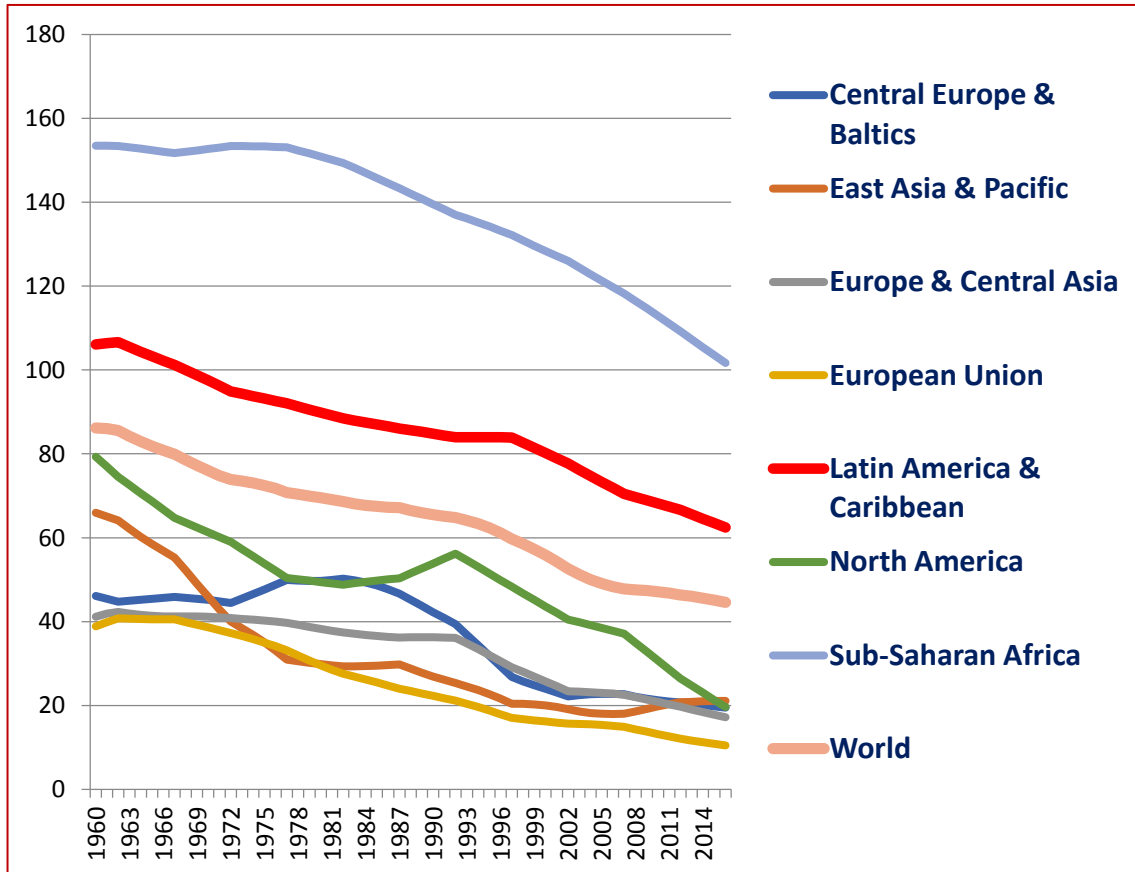

*UNFPA. Girlhood, not motherhood: Preventing adolescent pregnancy. New York: UNFPA; 2015.*

Based of ENADID 2014*

## The situation of Early Unintended Pregnancy (EUnP): the case of Mexico

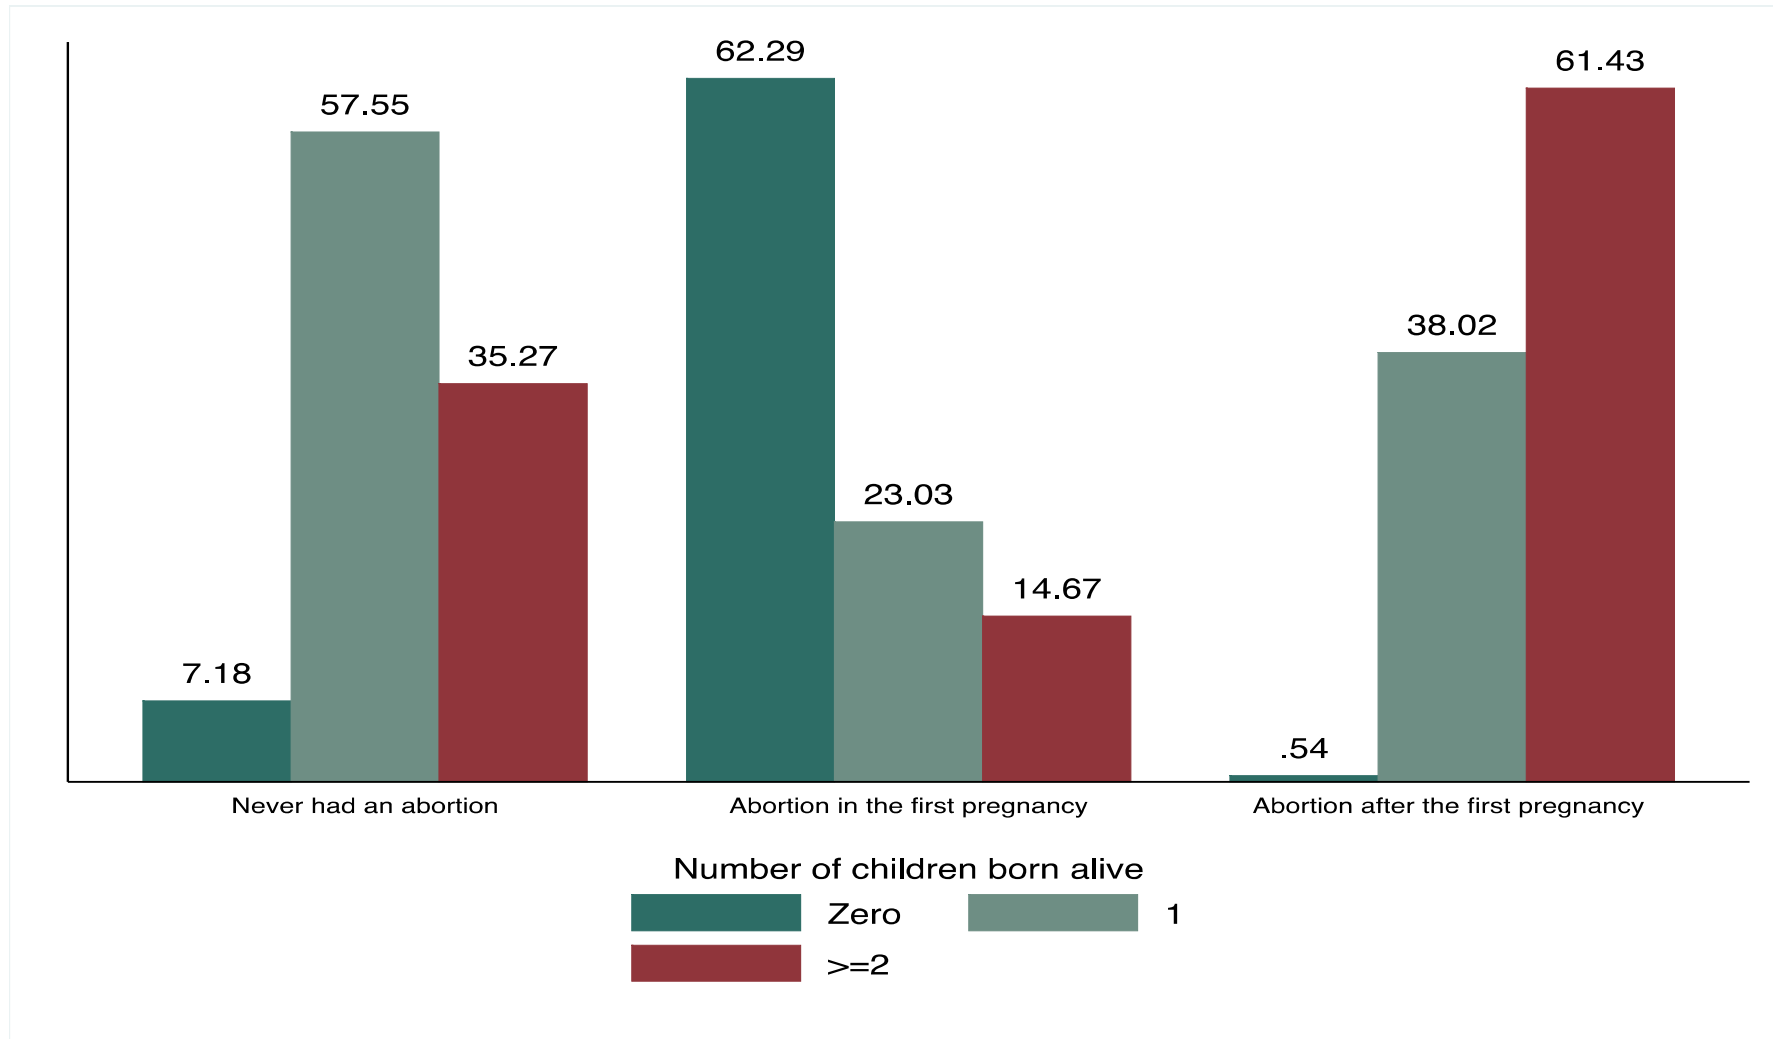

## The situation of Early Unintended Pregnancy (EUnP)

Classical social determinants of health (socio-economic status, schooling, residence, ethnicity) “regulate” adolescents sexual and reproductive transitions.

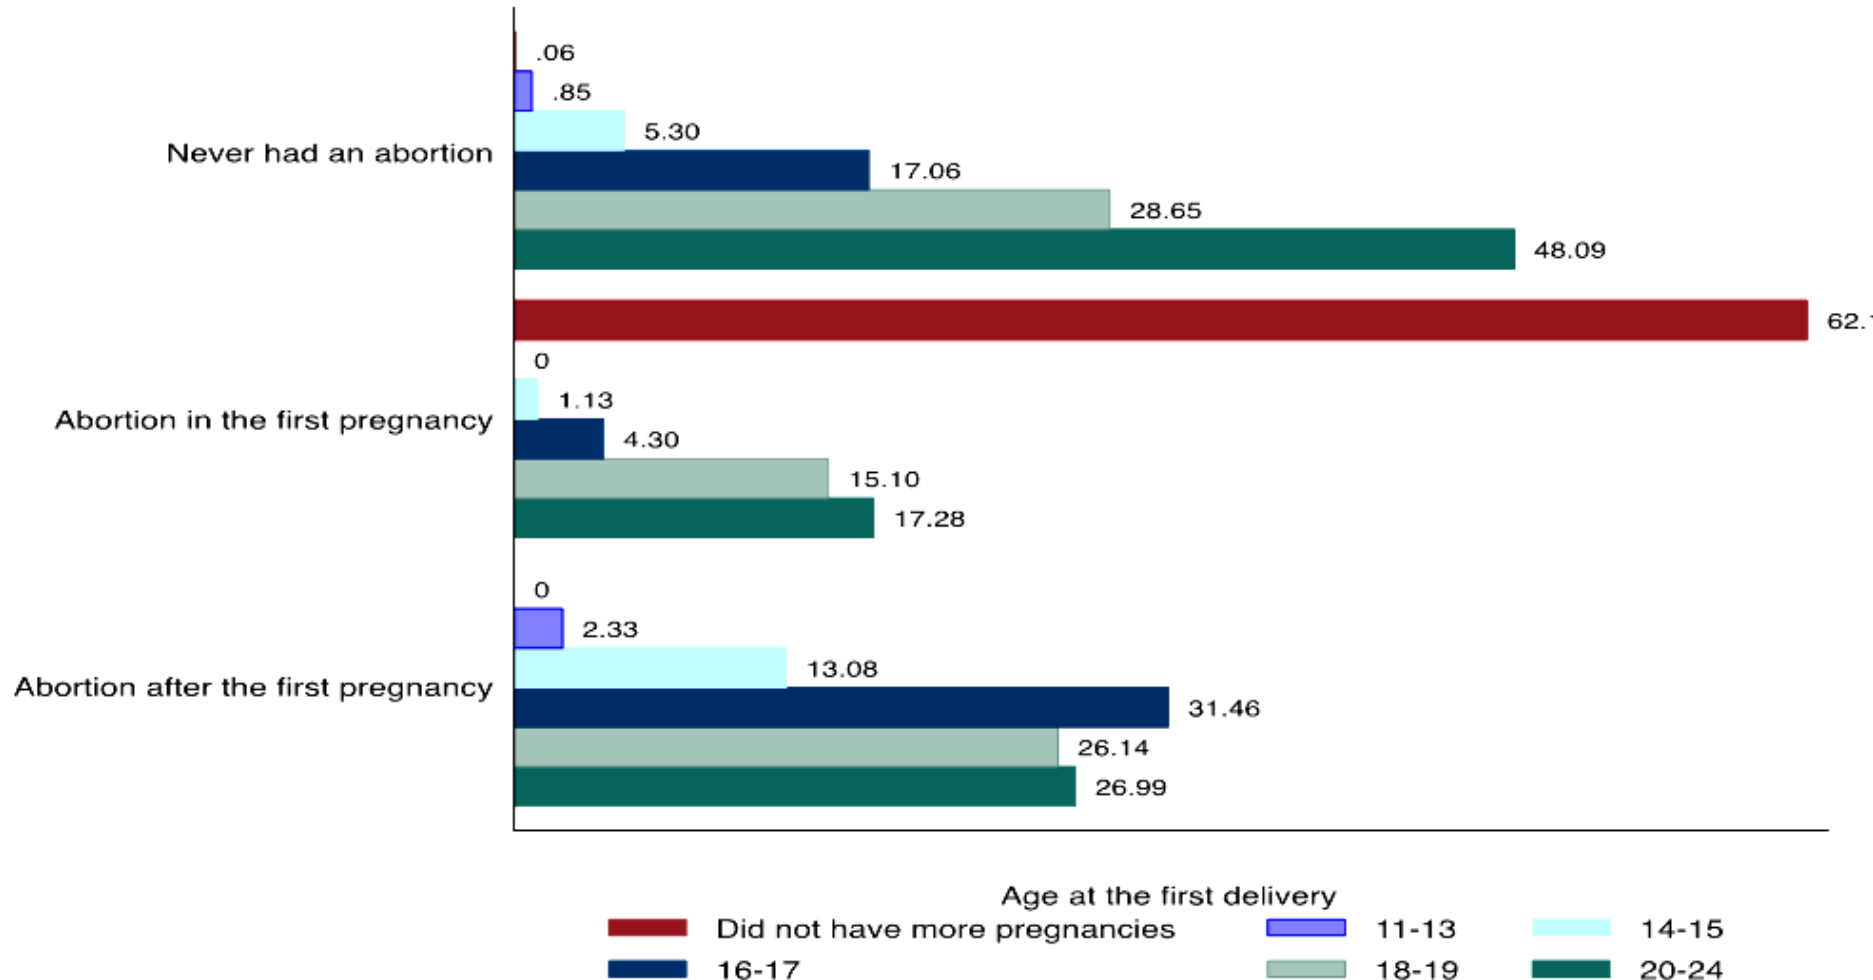

What else are we missing?

# The missing factors in EUnP: The role of abortion

Number of children born alive disaggregated by abortion experience, among women who ever had a pregnancy (n=1,992 N= 2,682,286)

# The missing factors in EUnP: The role of abortion

Age of the women at the first delivery, among women who ever had a pregnancy (n=1,992 N= 2,682,286)

# The missing factors in EUnP: The role of abortion

Abortion of a first teen pregnancy is associated with delayed age at first child and lower number of children by 20-24 ys. of age.

Abortion appears to be an important mean to limit early fertility, especially when it ends a first reproductive experience among adolescents and young women.

Around the world, the proportion of teen pregnancies that end in abortion range from 17% in Slovakia to 69% in Sweden; they are higher where teen pregnancy rates are highest.

## The missing factors in EUnP: The Age of partner

# The missing factors in EUnP: The Age of partner at first sex

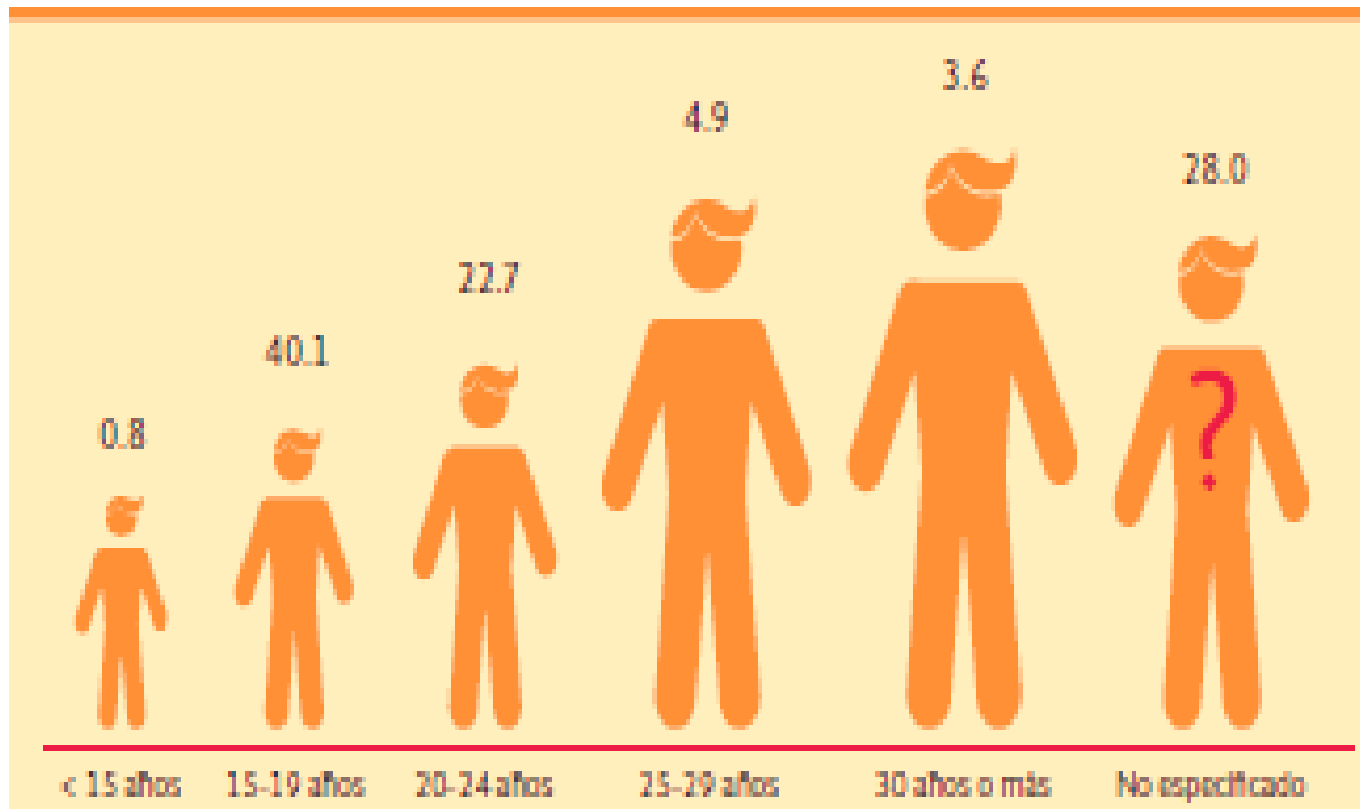

In 2012, in Mexico:

- 92% of sex partners to teens <12 ys. were 15-19 ys; 3.3% were >30 ys.
- 65% of sex partners to teens 12-14 ys. were 15-19 ys; 24% were >20 ys.

*Source: ENSANUT 2012, Analysis by Ipas Mexico, 2015*

## The missing factors in EUnP: The Age of partner at first child

In 2016, in Mexico:

- 0.8% of fathers to <15 ys. mothers were their same age
- 41% were teens
- 22.7% were 20-29 ys.
- 3.6% were > 30 ys.
- 28% were unknown.

## The missing factors in EUnP: The role of sexual violence

### SEXUAL VIOLENCE IN CHILDREN AND ADOLESCENTS

17 million in 38 low-middle income countries reported forced intercourse during their childhood.

2.5 million in 28 European countries reported sexual abuse before 15 ys. of age.

15 million 15-19 ys. old in the world have been victims of forced sex sometimes in their lives; 9 million of them in the previous year.

9 out of 10 adolescents who reported forced sex were victims of a relative, neighbour or somebody known to them. Only 1% of them searched professional health.

**Source: UNICEF 2015**

# The missing factors in EUnP: The role of sexual violence

Sexual and physical abuse are associated with increased risk of adolescent pregnancy; association with emotional abuse and neglect is weaker.

Sexual Abuse:	OR : 2.06
Physical Abuse:	OR : 1.48
Sexual AND Physical Abuse:	OR : <b>3.83</b>

## The missing factors in EUnP: The role of sexual violence

Sexual, as well as wider family and gender violence, is a common cause of early intercourse, early union and early pregnancy.

Existing socio-cultural norms, attitudes and practices continue to “normalize” sexual relationships, unions and pregnancies in children and adolescents due to significantly older male partners.

**Such normalization is inscribed in societies, communities, families as well as girls and adolescents themselves, who are often unable to recognize the abuse.**

## Best evidence-based practices to reduce EUnP

Enabling Environment	Service Delivery	Social and Behavior Change
<p>Enabling Environment HIPs address systemic barriers that affect an individual's ability to access family planning information and services.</p>	<p>Service Delivery HIPs improve the availability, accessibility, acceptability, and quality of family planning services.</p>	<p>Social and Behavior Change HIPs influence knowledge, beliefs, behaviors, and social norms associated with family planning.</p>

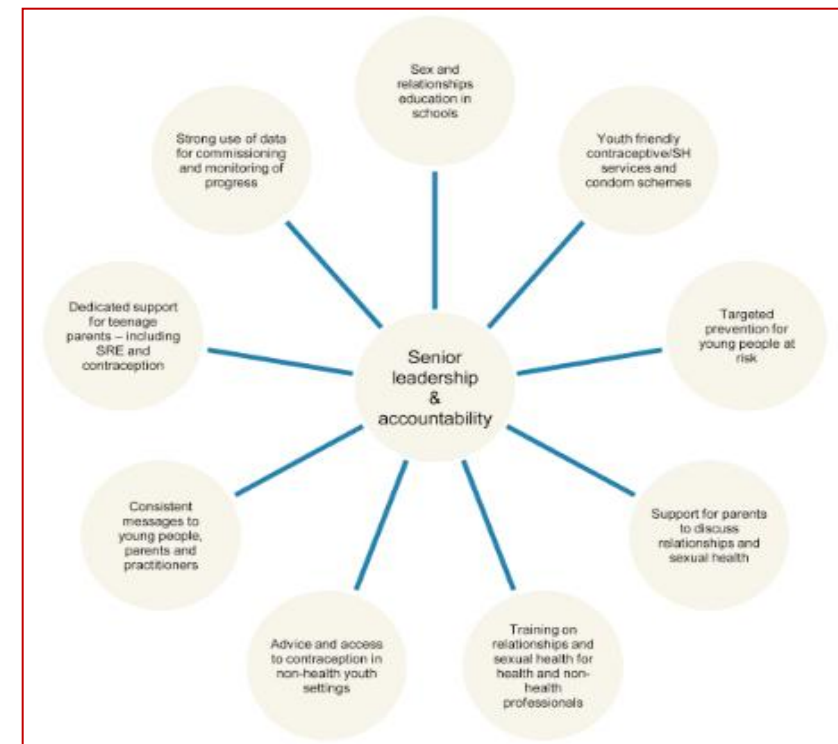

HIP Enhancing practices and technologies, that can intensify the impact of HIP, include:

***Adolescent-Friendly Contraceptive Services***  
***Digital health technologies in FP***

# Best evidence-based practices to reduce EUnP: Lessons Learnt, UK 1999-2010

## Key attributes (UK):

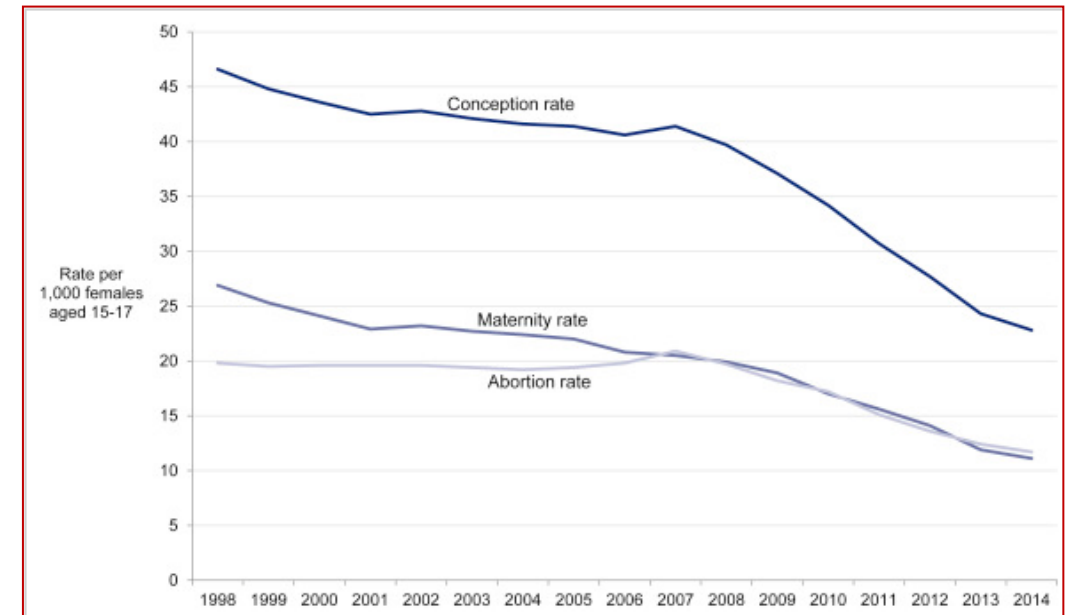

- Political leadership and champions
- Technical consensus about an appropriate public health approach
- Innovation available at an affordable price & delivered via effective delivery systems
- Good management in the field
- Predictable and adequate resources
- Strong partnerships
- Effective use of information

*Hadley A et al. Implementing the United Kingdom Government's 10-Year Teenage Pregnancy Strategy for England (1999–2010): Applicable Lessons for Other Countries, J Adolesc. Health 2016 59 (1)*

## Best evidence-based practices to reduce EUnP: Lessons Learnt, UK 1999-2010

- During the initial intervention, **Abortion Rates** contributed substantially to the declining Maternity Rates.
- Abortion Rates subsequently plateaued; **Contraception Rates** increased and contributed to declining Conception AND Maternity Rates.

*Hadley A et al. Implementing the United Kingdom Government's 10-Year Teenage Pregnancy Strategy for England (1999–2010): Applicable Lessons for Other Countries, J Adolesc. Health 2016 59 (1)*

# Implementation strategies in public policies in adolescents SRH

## Success stories:

- Estonia
- Mozambique
- Colombia

## Ongoing Strategies:

- Argentina
- Andean Region:  
Bolivia, Chile,  
Ecuador, Peru, Venezuela

## 15-19 vs. Fertility Rates

Fuente: United Nations, Department of Economic and Social Affairs, Population Division (2015). World Population Prospects: The 2015 Revision, custom data acquired via website.

## <15 vs. Fertility rates

# Implementation strategies in public policies in adolescents SRH

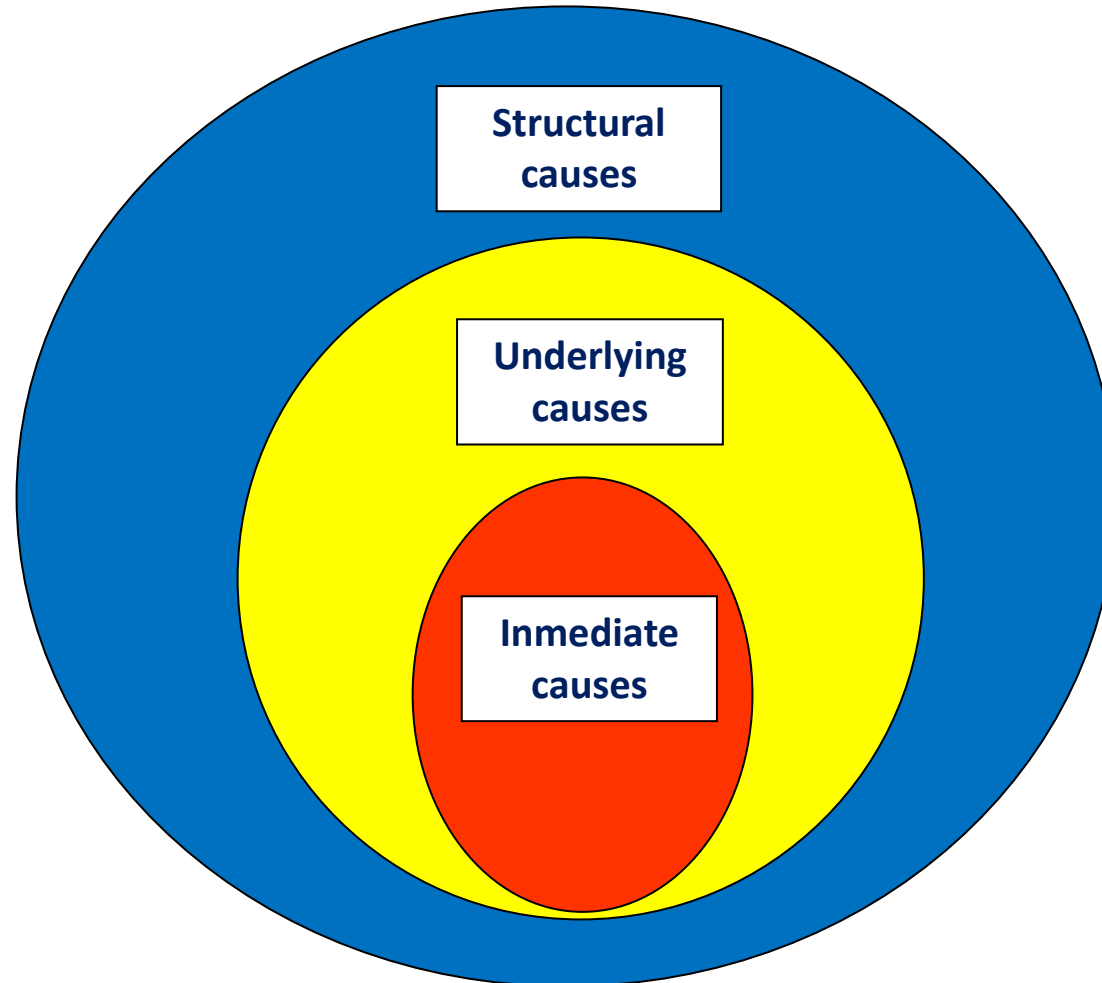

## ENAPEA 2015-2030

### National Public Policy:

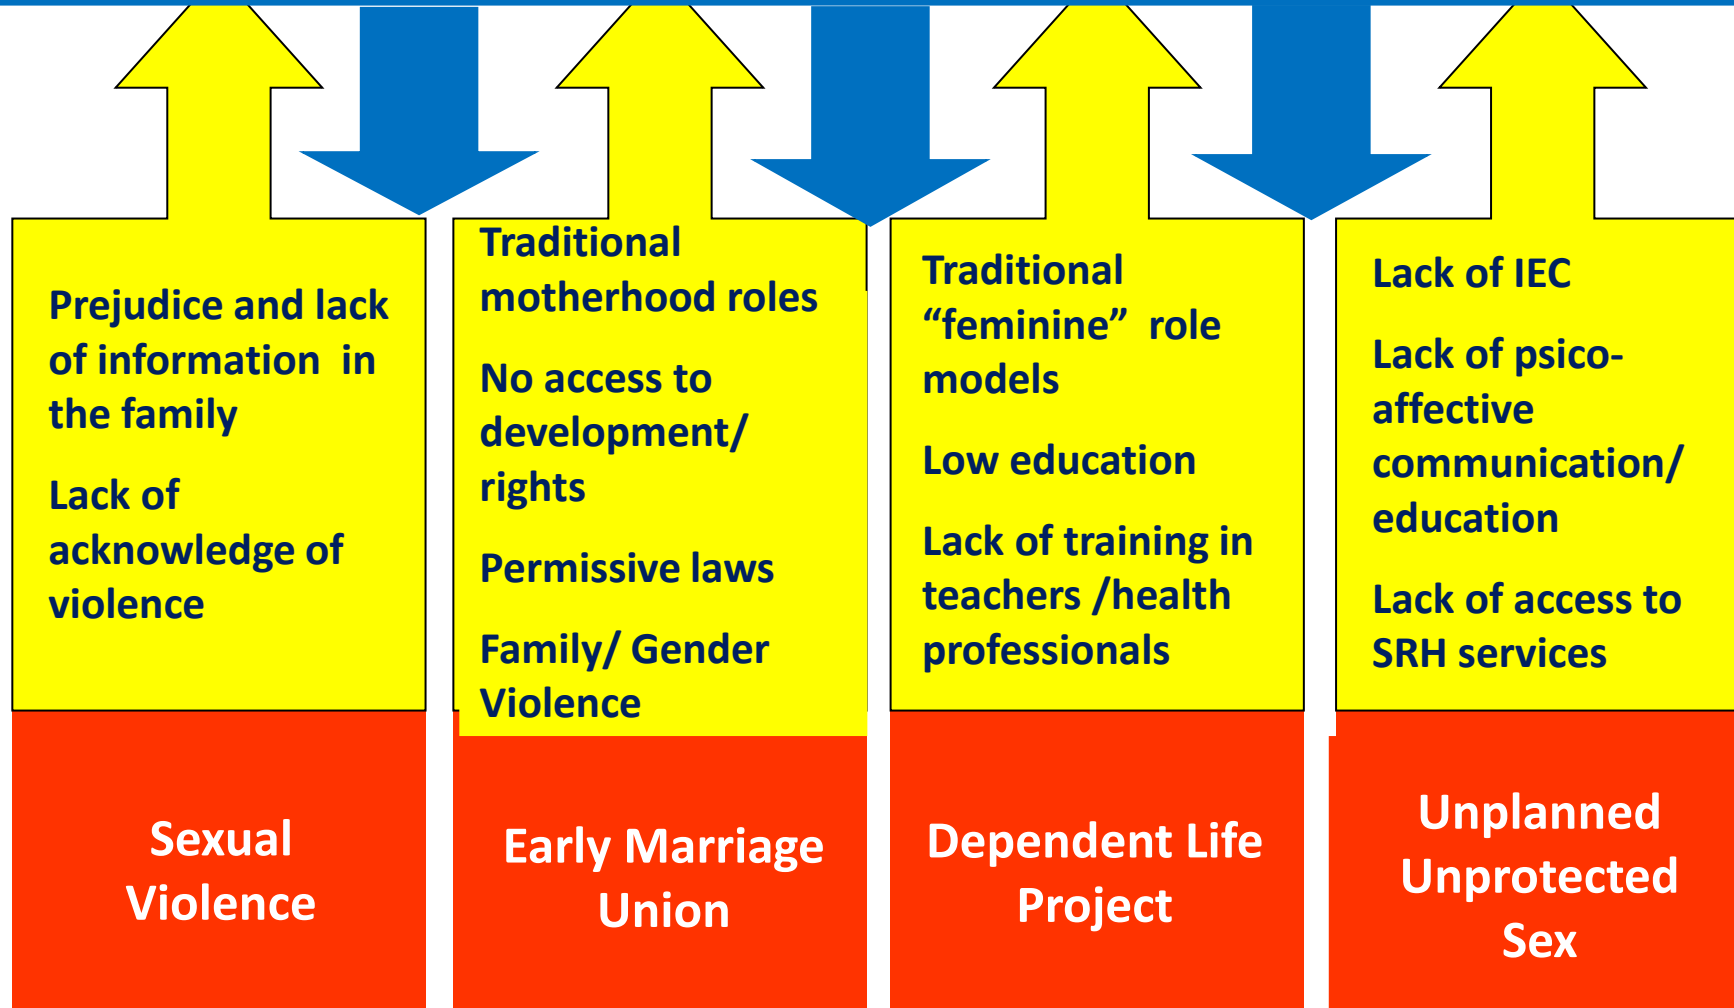

- trans-administrations
- intersectorial
- with median and long terms goals
- with differential strategies for specific age groups

# Causes of VERY early unintended pregnancy (EUnP): ENAPEA, an ecological model

**Socio-economic, gender and age inequalities**  
**Ambiguous legal and normative framework ; Lack of respect for lay state**  
**Impunity / lack of implementation of laws**  
**Adult-centric culture/lack of child and adolescent rights culture**  
**Fragmentation of health system/Lack of universal access**

## Key Messages

- 1) We need robust information systems on SRH Indicators, that include early adolescents (10-15 years), age at different transitions (1st Sex, 1st Marriage/Union, 1st Pregnancy and 1st Child) AND age of partners.
- 2) Public Policies must follow evidence-based best practices, with ALL the components, to address the multifactorial causes of EUnP.
- 3) National policies are key, but local implementation is essential (in provinces, municipalities and communities).
- 4) Public Policies and interventions must focus differently to the different causes of early/very early pregnancy: i.e. unplanned vs. forced sex.
- 5) In all cases, a wide range of effective contraceptives, including EC, and safe and legal abortion should be provided to all girls and adolescents in need.

Challenges and opportunities in preventing first-pregnancies among adolescents: social determinants of contraceptive behavior.

*Thank you!*
